

Replacing Loading Computer Hardware: Deactivate MACS3 License

On the computer that should be replaced, you need to deactivate the MACS3 license using the License manager Command Line (CLI)

1. Please ensure the computer is connected to the Internet
2. Open up a Windows command prompt: Click Windows Start menu and just start typing 'cmd'
3. The command prompt application will be enlisted, hit 'enter' to open it
4. Assuming MACS3 is installed to the folder c:\mxmacs3, type 'cd c:\mxmacs3' and hit 'enter'
5. Type 'licensemanager.cli.exe deactivate' and hit 'enter'
6. If the response is positive, you can continue installing and activating the software on the new computer
7. If the response is negative, please contact us at service.macs3@kaleris.com
